XPS brand

XPS products are designed to be the best, with cutting-edge technologies, exceptional build quality, unique materials and powerful features. XPS brings together the most elegant designs and premium experiences to enhance your work and personal success. This combination ultimately results in beautifully crafted products with no compromises.

Premium design — XPS laptops are thoughtfully designed for performance and function. Every material is selected to enhance performance and every design decision made is made with purpose. XPS laptops are precision crafted from authentic materials like machined aluminum, carbon fiber, woven glass fiber and hardened Corning® Gorilla® Glass for incredible durability and a superior experience.

Ultimate experience — While XPS laptops are thin and beautifully crafted, they also provide the most uncompromised experiences for work and play. XPS laptops have all of the performance you need, packed into smaller, thinner and more innovative designs. Each XPS product has a specific customer and usage in mind and a high performance standard to meet their expectations. Every interaction with your laptop from best-in-class displays to a superior touchpad and keyboard experience are prioritized for usability excellence.

Innovation — Innovation starts with XPS, where cutting-edge technologies like InfinityEdge displays and groundbreaking thermal design lead the way for the most aggressive form factors. Enabling technologies, like miniscule camera design shatter boundaries, while leadership in core technologies provide the best customer experiences.

Feature overview

STUNNINGLY SMALL. MASTERFULLY DESIGNED.

The XPS 13 is crafted using authentic premium materials, precision cut to achieve a flawless finish in a durable, lightweight design. The finest details are considered, and the essentials are elevated. It is designed to create the perfect affinity between aesthetics and functional purpose. Small, thin and light, the new XPS 13 delivers a truly superior experience. It boasts powerful performance and a larger 4-sided InfinityEdge display which is nothing short of spectacular. Perfection has never been closer.

Feature overview

Masterfully crafted

The XPS 13 is crafted of authentic, premium materials. Everything is done with purpose and fanatically thought through. There is a truth and integrity in materials. In the end, it's more than just a single material, but the combination of all that creates a stunning and durable design.

Beautifully crafted: XPS encapsulates both power and beauty. High-end materials are meticulously chosen to balance weight, size, performance and durability. Precisely engineered parts ensure best-in-class aesthetics and workmanship.

Precision manufacturing: The XPS 13 is cut from a block of aluminum in two pieces, so it's more durable than a machine that's pieced together. 100% of an XPS enclosure is sculpted by CNC (computer numerical control) machining process. Corning® Gorilla® Glass 6 is bonded to the aluminum, and is tough, damage resistant, durable and elegant.

Diamond cut sidewalls: Gleaming, double-anodized side edges depict the pinnacle of attention to detail. The design allows for the very narrow display border, but is beautiful and resists scratches better as you plug in peripherals. The designers went through multiple trials to achieve a flawless, polished finish.

Maximum strength, minimal weight: For the dark interiors, waves of 3K carbon fiber allow for maximum strength and minimal weight, plus superior heat-resistance to the palm rest. The authentic arctic white woven glass fiber achieves the ultimate in high-strength and low-weight in this ultra-thin XPS. The chic woven glass fabric looks and feels like silk and the addition of titanium oxide provides a pearlescent sheen, while the soft-textured lattice fibers denote a sense of elegance. Our design team worked tirelessly to get the details just right—carefully crafted backlighting, UV- and stain-resistant coating to prevent yellowing over time and staining.

Fine details: Aesthetically, less is more. The XPS logo on the base is laser cut out of a sheet of stainless steel and dropped into the machined cut outline by hand. Mics aligned with bottom screws and laser-etched regulatory details show the fanatical attention to detail.

Feature overview

Stunning 4-sided InfinityEdge display

The final frontier: A vision and work in progress for the last five to seven years has been achieved with the new 4-sided InfinityEdge display, reducing the bottom bezel from 19.5mm to only 4.6mm.

13.4-inch display in 11-inch size: We've squeezed a 13.4-inch screen into the size of an 11-inch laptop, so you have a large screen in an tiny footprint. With an incredible 91.5% screen-to-body ratio, a 7.8% improvement, users can truly enjoy all beautiful screen.

Feature overview

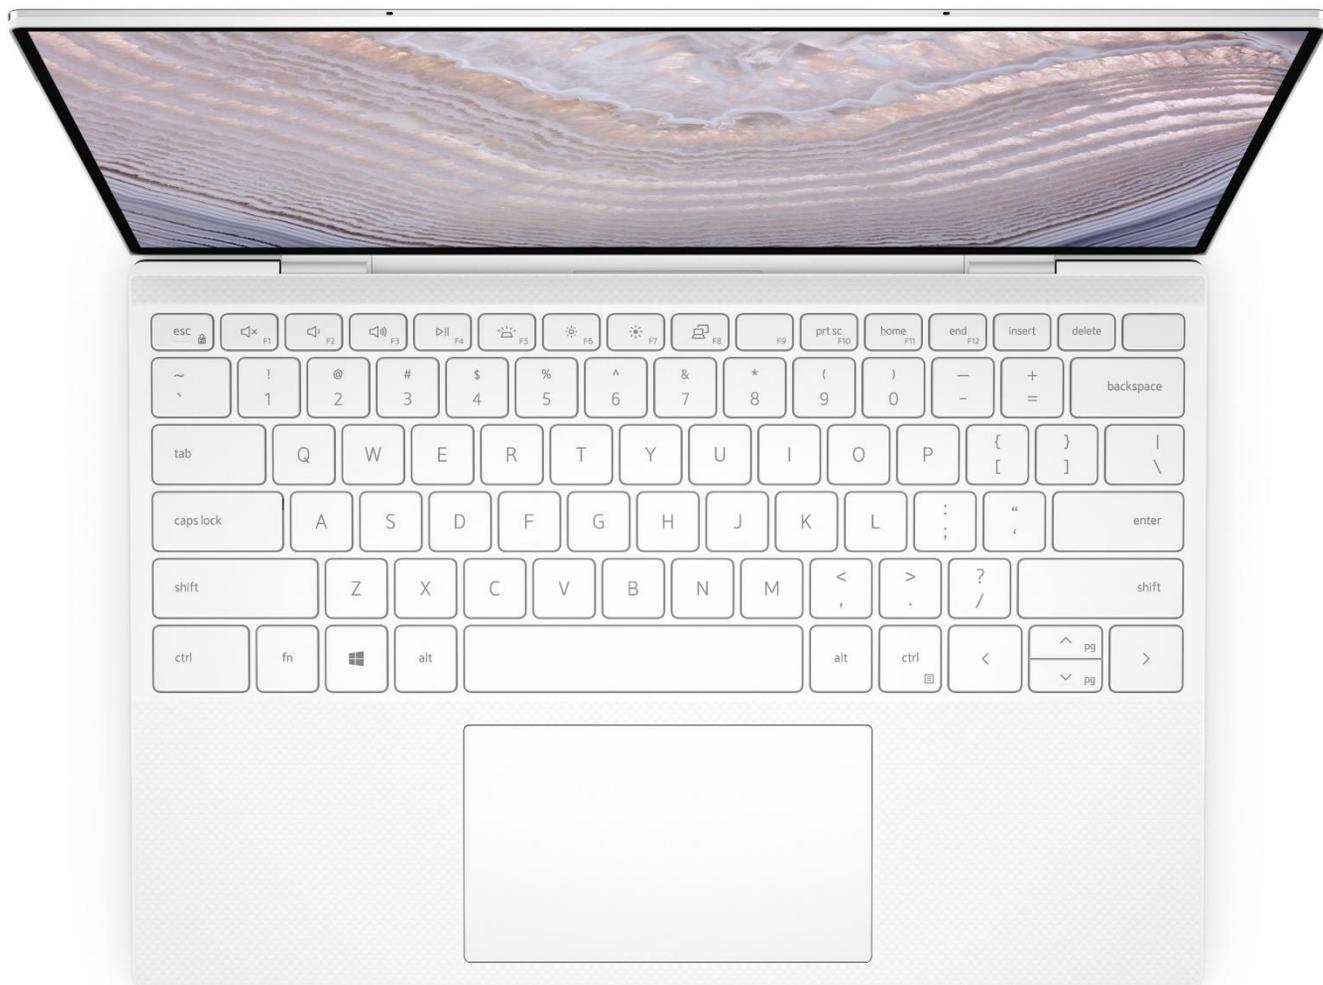

Highlighting the essential

New modern design: The new XPS 13 is an evolved, modern design for XPS. By maximizing experiential elements – such as a bigger display, an edge-to-edge keyboard, a larger touchpad – the design puts a focus on elevating the essential.

Almost a million more pixels: The 16:10 display is 6.8% larger than before in a 2% smaller size, designed to make users more productive.

Elevating the essential: The streamlined design embeds a fingerprint reader in the power button, allowing for the creation of the new edge-to-edge keyboard. Along with 9% larger key caps, less lattice and a 17% larger touchpad, this stretches the usable area to the outer limits.

Easier to open: The twin-coil press fit hinge is designed to maximize the screen to body ratio and enable 4-sided InfinityEdge. It also makes it easier to open and reduces the cut out at the top of the palm rest for an even cleaner look.

Feature overview

Tiny but mighty

Exceptional experience anywhere: Intel® EVO™ series brings the perfect combination of performance, responsiveness, battery life and stunning visuals to a new class of sleek, stylish laptops. Co-engineered with Intel and verified to provide the ultimate experience for life or work anywhere.

Breaking the boundaries of performance for thin and light laptops: The unmatched speed and intelligence of 11th Gen Intel® Core™ processors and Intel® Iris® X^e graphics makes your experience fast, smooth and easy.

Advanced thermal design: Everything about how we engineer and design the system, from dual fans separated to spread heat over a larger area and a single heat pipe designed with a single evaporator and dual condenser, ensures you have the best performing system in the thinnest form factor possible. Hidden exhaust vents in the hinge also help with airflow and a slight ramp aids in lifting more heat out. Additionally, your system is equipped with GORE™ Thermal Insulation, which provides thermal conductivity levels lower than air in a thin, flexible format to help keep components cool.

Faster time to productivity: A built in sensor allows you to open the lid and power up in milliseconds, no matter what power-state you are in. Plus, with Windows Hello and a fingerprint reader built into the power button you can log in with just a touch. Or use the infrared camera with facial recognition to log in with just a look.

Long battery life: With long battery life, the XPS 13 can take you through your day without need a charge.

Killer™ AX1650 built on Intel WiFi 6 Chipset: Featuring advanced Wi-Fi 6 technology, the Killer AX1650 is nearly 3 times as fast* as the previous generation of 80MHz 2x2 AC products. The Killer 1650 automatically detects, classifies, and prioritizes streaming video, communication, and game traffic in your system for fast, smooth online experiences.

Feature overview

State-of-the-art viewing experience

Less border, more pixels: The stunning 4-sided InfinityEdge display is a 16:10 aspect ratio, making this 13.4" display 6.8% larger than before. That is almost 1 million more pixels, designed to enable more productivity. With an 91.5% screen-to-body ratio, your view is all beautiful screen.

The optional 4K Ultra HD+ (3200 x 2400) display boasts 90% DCI-P3 color gamut and 1500:1 contrast ratio for stunning clarity and vivid, accurate color. The screen has a 0.65% anti-reflective coating, so you have a beautiful glossy screen without the glare for working outside or in bright indoor light. With 500-nit brightness and wide 178-degree viewing, your view is spectacular from any angle.

Entertainment in spectacular HDR: The 4K UHD+ VESA certified DisplayHDR™ 400 panel enables over 16 million colors, so you see more of what you see in real life. Both panels are Dolby Vision™ certified. That means that whatever HDR content you are viewing will have more depth and color range than a standard SDR display. Colors will pop, brights are brighter and darks are darker.

Reduces harmful blue light and maintains vivid color: The Eyesafe® display intelligently manages light energy at the source – selectively reducing harmful blue light and dispersing it across the light spectrum. Our unique solution combines RGB hardware and software adjustments to more effectively protect against blue light, while maintaining vivid color integrity. Dell is the first to offer this integrated solution.

Feature overview

Project Sputnik

The new Linux-based XPS 13 developer edition represents the 10th generation of Project Sputnik's developer-targeted XPS 13s. This new developer edition is very much the same as its Windows counterpart, however the system comes with Ubuntu 20.04 LTS preloaded straight out of the factory.

Project Sputnik began nearly 8 years ago as an exploratory skunk works project driven via social media by community input. Besides the svelte XPS 13 developer edition the Sputnik portfolio includes the beefy line of Ubuntu-based Precision mobile workstations. While project Sputnik is the most visible set of Linux-based offerings from Dell, it is a small fraction of the over 150 systems that make up Dell's Linux portfolio which is the broadest in the industry.

Skunk Works origins: Enabled by an internal innovation fund, the Dell XPS 13 developer edition began life as "Project Sputnik" an exploratory, skunk works project to create a developer-focused system based on Linux.

Transparency and inclusion from day one: From the project's beginning the guiding principles for the effort have been 1) directly engage and involve the developer community and 2) Conduct the project out in the open via public blogs and forums.

Community input/support: As a direct result of the amazing feedback and input received from the community the project became an official product. As the project has progressed, the team has continued to solicit and incorporate feedback from the community.

A good community member: Being a good open source community member has been a key tenant of the initiative. As a result, the device drivers that are written are pushed upstream into the mainline Linux kernel. This allows customers to run other Linux distributions on the systems, like Linus Torvalds runs Fedora on his XPS 13 developer edition.

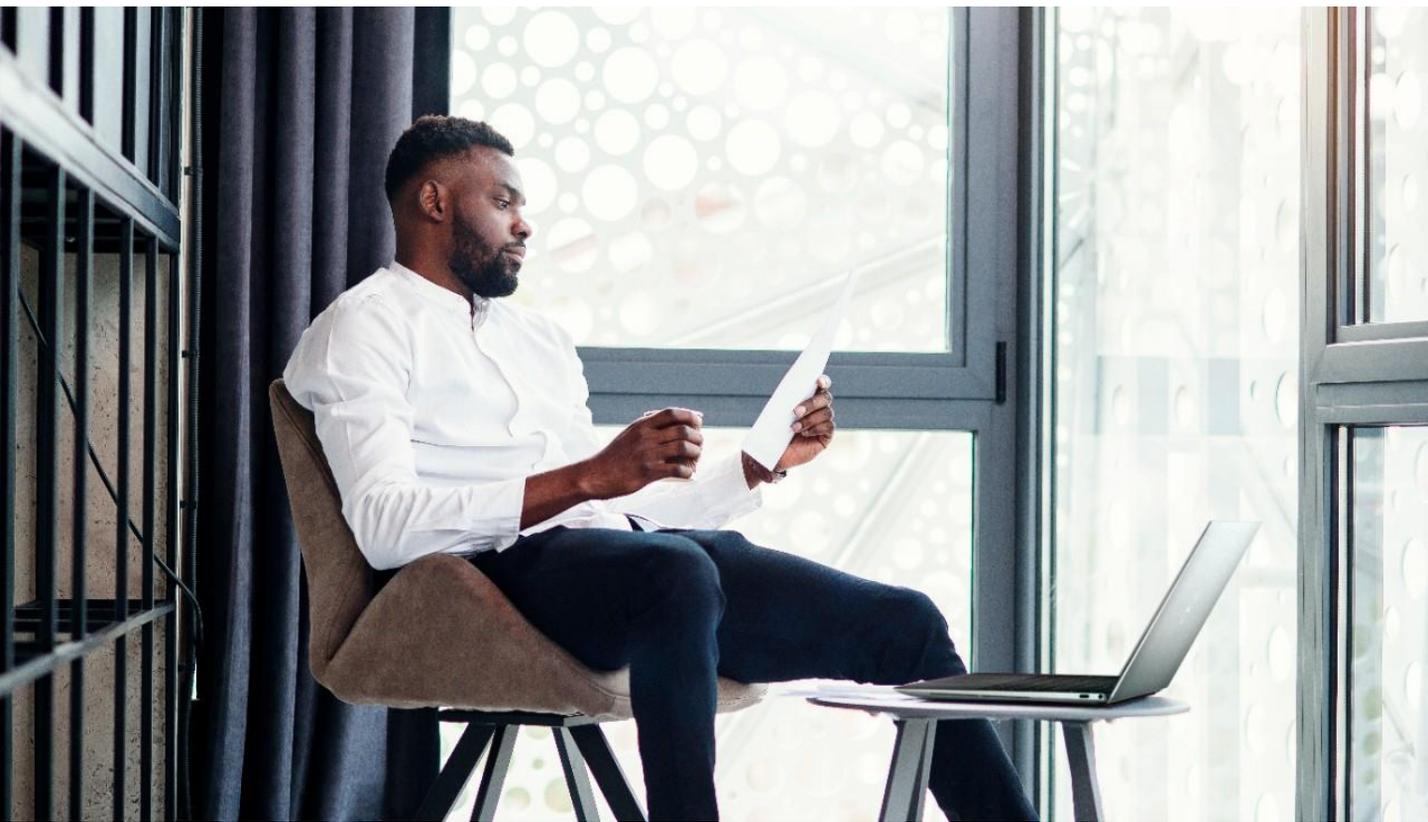

Feature overview

Advanced technology made simple

You are the password: Use Windows Hello to securely log on to your laptop. The fingerprint reader integrated into the power button lets you log on with just a touch and the built in infrared camera uses facial recognition to log you on with just a look.

Far-field Cortana capable: The XPS 13 responds to your voice from up to 14 feet away, thanks to four built-in mics, Microsoft Cortana and Waves-enabled speech technology. Control playlists and access schedules regardless of background noise.

Leading-edge connectivity: Two Thunderbolt™ 4 multi-use Type-C ports allow you to charge your laptop, connect to multiple devices (including support for up to two 4K displays) and enjoy data transfers up to 40Gbps -- 8 times that of a USB 3. Another UBC-C™ port allows you to charge your laptop or run a display as well. Every box ships with a USB Type-A to Type-C adapter.

Built for business

Manageable and secure: XPS is doing more than ever before to ensure it fits into a business environment. The XPS 13 has all of the manageability and select security features of Latitude™ in an aggressively thin and competitive form factor. Select custom configurations are globally available. XPS 13 does not have vPro options.

Feature overview

Eco-wise

Saving our seas: Recognized by CES with a "2018 Best of Innovation Award," our molded trays are a step beyond recycled. Twenty-five percent of the material consists of ocean plastics collected from coastal areas, while the remaining 75% is made up of other recycled plastics.

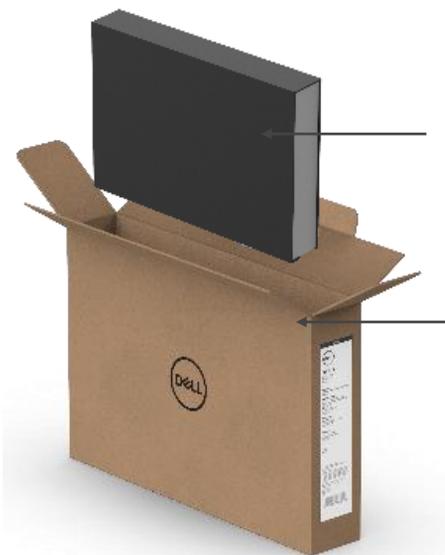

Power efficient: XPS 13 is ENERGY STAR® certified.

Smarter materials: Free of materials like cadmium, lead, mercury and some phthalates, it's also EPEAT® Silver registered* and BFR/PVC-free*.

Recycle-friendly: 90% of the laptop's parts can be easily recycled or reused.

More sustainable packaging

The new XPS 2020 packaging solution is clean, simple and more premium, enhancing the consumer unboxing experience. Accessories are removed from the bags and placed underneath the system for a curated experience. As Dell drives toward its 2030 Moonshot Goal of 100% sustainable packaging, the 2020 XPS family was focused on customer feedback to increase the ease of recyclability by eliminating foam and single use plastic bags. The gift box wrap, document folder, and accessory divider materials are made from sustainably sourced materials. More recyclable than before, this packaging qualifies for EPEAT Silver Certification.

Gift box wrap (paper), document folder, and product tray materials will be made from sustainably sourced materials

Outer shipper is a full corrugate solution making it easier to recycle. Toss the entire box in the recycling bin and forget it.

Black product tray is constructed with 25% ocean bound plastic + 75% recycled content

Bags removed from drop-in-the-box items (cables/dongles/adapters) produce less waste

White tray utilizes Bamboo Molded Pulp material
